

RELEASABLE LOCKING APPARATUS

Abstract Of The Disclosure

5 Locking apparatus adapted for releasably
holding a first member, which can be, for instance, a
relatively heavy member or device such as a crop residue
spreader, in one or more predetermined positions
relative to a second member, which can be, for instance,
10 a fixed structure of an agricultural combine, which
apparatus when locked and actuated or moved into an
unlocking mode will automatically unlock when any forces
urging the apparatus to remain in the locked condition
are overcome or removed or are otherwise absent, and
15 which when actuated or moved into a locking mode, will
automatically lock the members together when in or moved
to one of the predetermined positions.
